

Positive Actions for People, Nature, & Climate

A Carbon Literacy® course

Comments from participants in August 2025:

- I've gone from feeling overwhelmed to empowered. Thanks for inspiring me.
- I'm definitely more aware of ways to help my children come up with good habits.
- I'm less skeptical about some of the big ideas, and for sure, I can have better conversations
- I'm keen to read through the detail in some of the slides to help me share information without being a 'climate bore'.
- I really value all the slides and information. It's thought-provoking and I feel much better equipped to talk to my MP.
- I'm very glad I did the course. It's a bit like a pebble in a pond. Who knows how far those ripples will spread.
- Very helpful. It will help me make the leap to giving my first talk in church in a way that is beneficial, and helps to take people with us.
- The course has been brilliant. It was practical and I can talk about sustainability with more confidence
- The content and links are utterly amazing.
- The course met my expectations and more.
- I'm more aware about the importance of the speed of action
- I know more about how I use energy. This gave me the confidence to contact my energy supplier and my bill has gone down as a result.
- This course has enabled me to have more effective conversations outside of the academic world, with it's accessible information which helps people to engage.
- I have more understanding, and with more to come from going back through the slides. The points are concise and will help me set the tone in conversations.
- I really enjoyed the course and it has taught me so much about carbon that I didn't know. I found the myth-busting part at the end really insightful and I will definitely learn some of the facts and read more, so that I can have sensible conversations with others.
- I so enjoyed the course. It was thoroughly engaging and rewarding. The amount of information was enough, without being overwhelming, and a level which required effort and engagement without being daunting.
- I recently took a different environmental course, but the Carbon Literacy approach is magnitudes better, with it's tangible actions to implement afterwards.
